Pathologies of the Nose and Paranasal Sinuses-II

In continuation with the previous issue dedicated to similar pathologies, this issue envisages to further cover topics related to pathologies of the nose and paranasal sinuses.

As we delve more into this field, we realise that there are so many more ways to tackle surgical issues, and the purpose of this issue is to highlight such methods. Often we deal with pathologies that have well documented standards of care; what differs is the approach keeping the same surgical principles in mind.

Further issues dedicated to this exhaustive aspect of Otorhinolaryngology shall ensue.
