Systematic review of cell adhesion molecules and estrogen receptor expression in the endometrium of patients with polycystic ovary syndrome

Examination of placental three-dimensional power Doppler indices and perinatal outcome in pregnancies complicated by intrauterine growth restriction

Obstetric and neonatal outcomes after preterm premature rupture of membranes among women carrying group B streptococcus

Minimizing verification bias in cervical cancer screening of HIV-infected women
In Dysfunctional Uterine Bleeding,

DEVIRY-10mg
Medroxyprogesterone acetate U.S.P. 10 mg Tab.
The feminine progesterone

Excellent Efficacy
- Rapid saturation of endometrium¹
- Stops excessive blood loss in 25% patients within first 24hrs of treatment¹
- Controls complete blood loss within 4 days¹

Superior Compliance
- 57% DUB patients expressed satisfaction with MPA therapy²
- Less androgenic activity than norethisterone³

DUB- Dysfunctional Uterine Bleeding  MPA- Medroxyprogesterone Acetate

The Honorary Secretary at that address.
1. Aims and Scope

The International Journal of Gynecology & Obstetrics publishes articles on all aspects of basic and clinical research in the fields of obstetrics and gynecology and related subjects, with emphasis on matters of worldwide interest. The purpose of the journal is to serve an international audience by publishing original scientific articles and communications originating in low-income countries which emphasize important obstetric and gynecologic problems, issues, and perspectives, such as maternal mortality and family planning; as well as publishing original articles and communications from the scientific community of high-income countries, with particular emphasis on sharing advances in the specialty of obstetrics and gynecology.

2. Ethical Considerations

Manuscripts submitted for publication must comply with the following ethical considerations:

Informed Consent

Informed consent of the patients must be taken before they are considered for participation in the study. Patient identifying information, such as names, initials, hospital numbers, or photographs should not be included in the written descriptions. Patient consent should be obtained in written and archived with the authors.

Protection of Human Subjects and Animals in Research

When conducting experiments on human subjects, appropriate approval must have been obtained by the relevant ethics committees. All the procedures must be performed in accordance with the ethical standards of the responsible ethics committee both (institutional and national) on human experimentation and the Helsinki Declaration of 1964 (as revised in 2008). When reporting experiments on animals, authors must follow the institutional and national guidelines for the care and use of laboratory animals.

3. Copyright

Following guidelines must be followed before submission of the manuscript:

The articles must represent original research material, should not have been published before, and should not be under consideration of publication elsewhere. This, however, does not include previous publication in form of an abstract or as part of published literature (review or thesis). It is the duty of the author to obtain the necessary permissions for extensive quotations, tables, illustrations, or any other copyrighted material they are using in the paper before a paper can be considered for publication. Copyright of the article gets transferred to Jaypee Brothers, once the article has been accepted for publication. The author would be asked to sign the “Copyright Transfer Form” before his/her article is considered for publication. Once the Copyright Transfer statement has been signed by the corresponding author, no change in authorship or in the order of the authors listed on the article would be accepted by Jaypee Brothers. Also, by signing the above mentioned form, the author reassigns the rights of copublishing, or translation if considered necessary in future to the publisher. In the advent of occurrence of any dispute, the matter would be resolved within the jurisdiction of New Delhi court.

While all care has been taken to provide accurate and correct information in accordance with the date of publication, neither the authors/editors nor the publisher takes any legal responsibility for any unintentional omission or error. The publisher makes no expressed or implied warranty with respect to the information contained herein. The published material cannot be photocopied for promotion, new works or resale. If this is required, specific written permission requires to be obtained from the publisher. Exclusive rights to reproduce and distribute the articles in this journal have been protected by copyright. This also covers the rights to reproduce or distribute the article as well as the translation rights. No material published in this journal can be reproduced in digital format or stored in form of electronic databases, video disks, etc.

Both the conflict of interests and financial disclosure needs to be handled well while conducting the research study. Disclosure of such relationships is also important in connection with all articles submitted for publication. Both of these have also been included in the copyright transfer form. Authors should give due acknowledgement to the individuals who provide writing or other assistance while conducting the research study and also disclose the funding source for the research study.

REVIEW ARTICLES

Brazil

Systematic review of cell adhesion molecules and estrogen receptor expression in the endometrium of patients with polycystic ovary syndrome

Studies of polycystic ovary syndrome have identified cell adhesion molecules and the estrogen receptor as endometrial factors affecting embryo receptivity.

2

M. Gupta, S.S. Lehl, R. Singh, A. Sachdev
India

Case-based approach to liver diseases in pregnancy

Liver dysfunction during pregnancy is multifactorial in origin, and the diagnosis is often challenging. The key to maternofetal well-being is an early diagnosis and appropriate management.

6

CLINICAL ARTICLES

B.T. Sureshkumar, S. Shanmughapriya, B.C. Das, K. Natarajaseenivasan
India

A population-based study of the prevalence of HPV in three districts of Tamil Nadu, India

Screening and prophylactic vaccines containing HPV16 and HPV6 should be encouraged to overcome the burden of HPV infection and thus cervical cancer.

14

Y.E. Sükür, D. Kankaya, C. Ates, A. Sertçelik, S.D. Cengiz, R. Aytac
Turkey

Clinical and histopathologic predictors of reoperation due to recurrence of leiomyoma after laparotomic myomectomy

Age, pregnancy after myomectomy, and histopathologic findings were associated with reoperation within 5 years of the index surgery owing to recurrence of leiomyoma.

18

A. Molnár, A. Surányi, T. Nyári, G. Németh, A. Pál
Hungary

Examination of placental three-dimensional power Doppler indices and perinatal outcome in pregnancies complicated by intrauterine growth restriction

Three-dimensional power Doppler ultrasonography showed that placental vascularization is reduced in pregnancies complicated by intrauterine growth restriction.

22

L.-Q. Hu, J. Zhang, C.A. Wong, Q. Cao, G. Zhang, H. Rong, X. Li, R.J. McCarthy
USA, China

Impact of the introduction of neuraxial labor analgesia on mode of delivery at an urban maternity hospital in China

The introduction of neuraxial labor analgesia in a Chinese hospital was associated with a decreased frequency of cesarean delivery.
